Professional Summary

BCA (Honours) Cybersecurity graduate with hands-on experience across software development, cybersecurity, Linux environments, networking, and infrastructure. Built practical projects involving security automation, infrastructure monitoring, secure application development, and network analysis. Interested in engineering environments where software, security, and infrastructure intersect.

Technical Skills

Programming: Python, TypeScript, SQL, Bash, HTML, CSS

Development: React, REST APIs, Git, GitHub, VS Code

Cybersecurity: Wireshark, Nmap, Burp Suite, OWASP Top 10, Vulnerability Assessment, Secure Code Analysis, Traffic Analysis

Systems & Infrastructure: Linux, Kali Linux, Ubuntu Server, Apache, MySQL, WordPress, SSL/TLS, DNS

Networking: TCP/IP, DNS, HTTP/HTTPS, IP Addressing, Packet Analysis, Network Troubleshooting

Tools & Platforms: Vercel, Figma, VirtualBox, VMware, Semgrep, Gitleaks

Experience

Security Intern — Albus Security LLP

Feb 2025 – Sep 2025

Remote

- Completed a 7-month internship focused on Information Security, Web Security, and hands-on security research.
- Performed network traffic and packet analysis using Wireshark to study protocols, traffic behaviour, and security events.
- Conducted vulnerability assessments and worked in Linux-based environments for security monitoring and troubleshooting.
- Developed a Python-based Slowloris DoS attack automation project to study attack patterns, traffic behaviour, and server resilience in controlled environments.
- Contributed to a team-based QR threat analysis solution focused on identifying phishing, malicious, and suspicious URLs under mentor guidance.

Projects

SecureOps — Automated Security Analysis & Developer Guidance Platform

2026

- Built a security-focused platform for automated analysis, vulnerability scanning, threat intelligence, and actionable developer guidance.

OpsPilot — AI-assisted Infrastructure Monitoring and Troubleshooting Platform

2026

- Built a Linux-focused operations platform combining system monitoring, network activity tracking, and structured troubleshooting workflows.

VoteChain — Blockchain-based Secure Electronic Voting System

2023

- Developed a blockchain-based voting system focused on vote integrity, tamper resistance, transparency, and secure electronic voting.

WordPress Hosting Lab

2026

- Deployed and configured WordPress using Ubuntu Server, Apache, and MySQL, including DNS, SSL/TLS, and hosting troubleshooting.

Achievements

- NASSCOM Academic Grand Challenge:** Top 6 national-level team among 500+ teams.
- MSME Idea Hackathon 3.0:** Selected for the Women Category final pitch stage.
- Team Lead — Cyber Ninjas:** Led collaborative preparation and technical activities for cybersecurity competitions.

Education

Bachelor of Computer Applications (Honours) — Specialization in Cybersecurity

Aug 2022 – May 2026

Nitte Institute of Professional Education, Mangalore

CGPA: 7.82/10

First Class with Distinction

Certifications

EC-Council CodeRED: Ethical Hacking Essentials (EHE) | Introduction to Dark Web, Anonymity, and Cryptocurrency

Forage: Mastercard Cybersecurity Job Simulation | Tata Cybersecurity Analyst Job Simulation
